## 进程的创建和终止

## 代码门:

It is parent process. PID=7, i=8 >这两句的证置可 It is Child process. PID=8 / i=0 > 30万位 能互换 The finished child process is & The exit status is I

## 代码儿:

- (1) It is parent process. PID = 7, i = 8, It is child process. PID= 8, i=0
- (2) 马进程在sleep(100)后被延醒,执行完print操作 后通过exit(1)终止,在To+100时刻 了进程终止后校 冲进行监控队,由伊进行区域 PCB,在70+100研究 3进程终止后唤醒 讲进往,PCB 很快由用回收
- 我妈 1·3: ⑴ It is parent process. PID=7, i= 8 it is child process. PID=8, i=0 这两句能直接位置 心在70+107时刻由1井进程和19

173 14: 117 It is parent process. PID = 7, First Son: 8 It is child process . PID=9, i=0 Exit Son: 9, Exit Status = 2 It is child process. PlD = 8, i=0

120 子进程1 在70+100时刻的 冲进经回收 3进程2在70时刻面处进程回收
